

**The dark matter,
Matter of soul**

This time, despite his options, he could not continue for long his search for the complete man, for he thought it to be a futile exercise which was making him tired with no gain whatsoever. His mind cautioned him to desist from such an exercise and his soul was shaken and it guided his mind to take a better course of action than merely waste time. It was to happen one day. When one becomes tired of all external efforts, he is left with no option but to become introvert, and there only he can get something.

He was loaded with loathsome condition and dejection filled in his heart. He noticed a small round lake which was surrounded by the dense trees and there was some plain area nearby. He slowly landed on the green plain. The water of the lake was dancing with its waves, and the reflection of the moon acquired manifold form on the waves as if the reflection of the moon on the waves was competing with the feelings of the pilot.

On the other side, just on the horizon, the full moon with open heart was distributing its serene white splendor to all objects which were silently, rather uncomplainingly receiving the splendor. The atmosphere was quite

welcoming and it appeared as if it was inviting the Pilot to talk to him and share his feelings. He came out of the giant flying saucer and scanned the open space around him. His heart was much disturbed. His feet forgot the natural paces and were trampling the grass to such an extent that the trampled grass could not lift its head up again. As he entered the shrubs grown under a sprawling banyan tree, certain birds flew away from their making noise.

Not caring for the noise, he moved ahead forcing himself to the tree, perhaps the nosing emanating from tree was more significant for him. Tearing apart the hanging down roots of banyan, he straightway reached the truck around which a small circular platform of soil was raised. The trunk was surrounded with dirty looking white yarn. He sat on a smooth spot of the platform and leaning against the trunk he started gazing the moon.

From there, he could see the open space, the lake and his plane, all bathing in the silver light. The round shaped flying saucer was looking like another moon in the silver light. Running his sight through the open and silent space in front of him, he then raised his head upward and saw the

tall branches of the tree. The birds and insects in the tree were still making noise. He gazed at the moon-beams falling down through the foliage of the tree. It appeared as if he was sitting there to drink nectar from those cool beams.

His mind became one with the speed of the noise outside which then forced him to close his eyes and drew him to that stage where he had to represent himself in the form of soul and prudence, and behaving like a good judge he had evaluated the good and the bad and passed a judgment on himself.

On that stage, there were two parties standing vis-a-vis. Both the parties were alluring him and trying to win his favor. One of the parties was his brain, which was representing all information gathered in it, while the other was his fickle mind which was full of contra-opinions, and as it was like an unbridled horse, it could not be kept at one place under the control of the brain. That is why they were sitting like two opponents to each other.

His mind was tired and lacking enthusiasm, while the brain with the help of its knowledge was sitting abreast.

But, the aim of the debate today was not to decide of defeat or victory, but to reach the destination with the help of the ultimate truth, where the soul could see the clear road to take the right decision.

In order to reach the decisive point, the nerveless mind collecting its entire force began the debate with loathsome voice and told the brain, “O Brain, you have made me tired...how you made me run across the futile world...I never loved that race, yet you made me search for it. Oh, all-knowing brain, despite knowing all about me and my fickleness, why did you not tie me to a fixed peg of search? Look, how much tired have you made me? I cannot get up now and the entire life now seems futile. How enthusiastic and hopeful I was! But, you made me tired for the rest of the life. What was the need for searching the man while the entire Earth escaped from the man who was bent upon turning it into the heap of ashes? The man was also bent upon poisoning the air which was his breath as well as that of other creatures. How can such a block-headed being adorn the Earth and cure its wounds? The Nature which can save itself from the bloody claws can adorn itself as well. It

will once again come back to its life and beauty in the absence of the violent and cruel race of mankind. It will soon remove its widely spread snow-coverings and become embellished with the greenery all over. And, in that situation, the presence of even a single man will prove detrimental to the Earth. I tell you, the Earth will be lucky enough to have no man at all on its surface. Now, the future of the living planet is safe against its enemies. Then, what is the need for searching at least one of the enemies?”

Listening to him patiently, the brain slowly spoke, “Oh Dear, you are my shadow, but you lack the smell of the knowledge that is within me, otherwise you would not have asked such a question to me. However, let me shed for you that nectar-like taste of knowledge, by receiving which you will also feel blessed with completion. You may ask me as many questions as you wish; I will make you satisfied and doubtless so that you may not again commit the mistake of considering yourself distinct from me. Whatever I am going to tell you today will cause the last and the biggest event in you, for you will not be able to realize your own existence thereafter. So, listen to me

carefully the bitter truth. The Earth, which you have been considering inanimate so far, is a gigantic living creature, that is to say, the entire Earth is a living body and has its characteristics which are bound by the laws of Nature, and whose cyclic process on the time scale is always uni-sided. All its actions and reactions are in the cyclic nature. In case any part of its action or reaction is disturbed or damaged, its cycle also gets disturbed or affected, and that action or reaction then becomes useless for the future and remains detached from the main body. However, the Earth being a living creature or body compensates its loss and re-acquires its natural cycling process, it recycles itself. The human race also being an important part of the natural cycle was then destroyed forever, and the Earth, though capable of its own revival, would not be able to replace the destroyed component, the human being, with the suitable substitute, because there was (and also would be) no substitute to the human being on the Earth. It is not blessed with the faculty to invent the creature, like, human being, and so, it will have to repay for this loss by reducing in its age.”

The brain, listening to the mind, wanted to intercede but it was shocked to learn that the age of the Earth was linked to the mankind, and it became eager to know the cause of the linkage. He thought that he could not follow what the mind had said, and so it urged the mind to explain in detail the concept of linkage.

The mind needed some time to get energized to talk further, and so, both of them observed silence for a while. During the silence, the silence had to struggle against the noise. The silence however dominated over the noise. The entire open area also became a part of the prevailing silence. The milk-white moon was hanging over the head of the Pilot and its silver beams were showering on him through the foliage of Bunyan tree.

At the same time, the entire green plain was bathing in the silver shower of the moon, and the white looking giant flying saucer was resting in some corner like an old and tired granny awaiting the Pilot's return. The entire nature was observing silence in the moon light, as if in meditation. The pilot was however at the centre of the silver silence, while the interaction between his mind and brain was on.

Gradually raising the voice, the brain said to the mind, “Oh Mind, in order to understand this, you have to know about origin of the Solar family so that you may be able to estimate about its life. Listen carefully to what I am going to tell you. It is a story of pre-Solar family era. To believe it you will have to rely on certain exceptions as well. One of them is, a tremendously powerful mass of gravitational pull, which is situated at a fixed state in the Space. The immovability of this mass is an exception in this moving universe. Such a huge mass of gravitational pull develops after complete explosion of our star whose most of the fuel stock gets converted into energy. However, the left over element does not easily get converted into energy. In such a situation, the pressure of energy required for the motion outside increases manifold in a second, creating a huge mass of gravitational pull therein. But in this gravitational pull, there is yet a particle in the suddenly changing element which is always situated at centre of the star, and that particle escapes this process, and it becomes successful in coming out of the huge mass. We call it the instant particle (tat kan).”

According to him, there is a specific reason for the star to be safe from such explosion because that particle does not interact with the physical world in any way, and it does not produce any amount of gravitational pull around it in order to keep itself in the motion. It is due to this reason, that particle is the hardest particle in the Cosmos. That particle cannot get worn out and cannot be broken further by any action or process, while on the other hand, all other particles or waves are required to generate the required amount of gravitational pull in order to remain active or in motion.

In other words, other particles or elements have to pass through the gravitational pull, and therefore, there is a gradual wearing out for them. In this way, the existence also determines its own life span. The instant particle (tat kan) however has an exception, and it gets escaped from the explosions of the stars.

The instant particle is not influenced by the physical laws, and thus remaining in the existence, on the contrary it also has the capability of influencing the physical laws. This is the only particle violating every law in the physical

world. Any Sun or Solar family comes into existence on the basis of gravitational pull and instant particle (tat kan), but for this purpose the huge mass of gravitational pull must be in a special shape, possessing the capability to formation of Solar family, so that whenever it passed through the process of re-generation, it should provide a Solar family.

The instant particle (tat kan) after its safe come out immediately after the explosion in the star leaves for its infinite journey. During the journey, when it comes across the mass of gravitational pull, it, without being affected by the mass, pierces the mass and moves ahead.

Then, its piercing through the mass activates the force of gravitational pull, and then it draws up in a circular formation. Then, the instant particle (tat kan) keeps on piercing the mass within with certain speed of the force, but at the same time, the entire gravitational pull drawing up towards the particle with more speed or force than that during the piercing process tries to exercise its own force.

As soon as the pressure becomes more than the requirement, the entire pressure of the gravitational pull, ranging right from the instant particle (tat kan) to that point

of maximum pressure of the mass of gravitational pull, changes into a matter or material.

This moment of time is the moment of creation, coincidence and meeting of anything when at the same moment, at the same place and in the same mass several phenomena take place. When the gravitational pull tries to exercise its more than the required force on the instant particle (tat kan), the total gravitational pull of the mass becomes active and draws up in a circular formation to the instant particle, and then the total gravitational pressure gets changed into the matter which in itself is a pure energy.

But, the transformation of gravitational pull into pure energy is to that extent when the force keeps exercising beyond the limit of the requirement, and at the same time the energy-mass with speed keeps moving towards that point where the remaining gravitational pull is in greater quantity.

As the pure energy, because of being attracted by its natural primary pressure, starts moving towards the centre, the form of the pure energy, due to travelling a distance,

keeps changing into the complexity of the matter. After seconds, the large part of the energy loaded with complexity of the matter might have changed into a strong shield (coverage) around the instant particle (tat kan), and small part, because of being in maximum distance and also being in the state of loose coverage, must not have reached there and must have got struck with the harder and larger coverage (crust), and the pressure that was coming towards the centre (nucleus) must have got blocked up.

This being the situation, the entire force of the loose coverage must have changed to opposite direction, it must have got thrown up afar in the form of a half-moon in the dark Space. It is possible that a central force must have got built up at several points in its half-moon form; it must have got broken into several parts, stars and satellites, etc, all due to opposite pull. At the end of this coverage, several comets must have got formed, and in this way, the solar family must have come into existence soon after formation of the Sun.

In the beginning, the ball of fire must be appearing dark on one side because then it must be possessing the left

over gravitational pull in greater quantity and in its natural form, and which must have remained as it is because of not being in the state of pressure. The new mass, because of these reasons, must be possessing dark on one side, and it must have kept itself moving on its axis that very side, while on the other side wherein the gravitational pull coverage was loose, the rays must have shot up for the first time, and perhaps the Sun must have witnessed its place of origin, moving backward.

In this way, the Sun must have got out of the dark womb and started moving freely in the Space. In fact, the constructive part of the Sun or the solar family remained in the dark, completing its half of the construction in the dark, and it perhaps always functioned in the same dark system. As soon as the total gravitational pull changed into the purest form of energy, the energy, because of travelling a long distance, started changing into various other complex forms of the matter, and it got changed into hardness due to formation of the crust.

But, such a changing phenomenon was not the same with the Sun and its solar family. It is because both the

changes underwent a very great difference which remained as it is. On one hand, the entire matter of the Sun, right from its nucleus towards the crust, changed in to hardness and stability. On the other hand, the same matter in the members of the solar family, including the planets and satellites, started changing into hardness and stability, right from their crust towards the nucleus. Its sole cause is the circumstantial situation around them.

The gravitational pull which was left over in a large quantity helped the new matter cool down at the nucleus, before they could get united. It must have happened so because the Sun for its motion must not have needed the required gravitational pull from within, perhaps it must have easily got the required gravitational pull on the way. It is because of this, the matters around the nucleus in the Sun must have become inactive and thus cooled down. And, the moment the left over gravitational pull must have got exhausted, the Sun must have started gathering the needed gravitational pull from the hottest layer of the outer coverage (crust), and kept it always active, and which it has been doing time-to-time by changing the matter of outer

coverage into energy. In this way, the outer crust of the Sun remained very hot and acted as its very sensitive and complex brain.

In this way, the hardness of matter of the Sun from inside towards outside must have started receding, and on the basis of the activeness of its total matter, both types of its motion must have also receded, and in the long, its motions must have come to stable situation. The Sun the nucleus, slipped down below the freezing point. Isn't it a matter of great surprise ? At one place, the temperature is at the highest point on the out cover while the same is below freezing point in the inner part, the nucleus !!”

The brain, breaking the concentration of the mind for a while again asked, “Aren't you astonished even a bit ?”

Breaking its own seriousness, the mind now attacked the brain, saying, “I feel, you are still in doubt about your knowledge, but worry not, I fully agree with your reasoning, please do not leave me in the midway, complete your talk. You always kept the knowledge of the Cosmos concealed from me. I am really sad, you always considered me a stranger.”

When heard the word 'doubt', the brain landed into the state of dilemma. It could not understand the talks of the mind, but in few seconds, recognizing the integrity of the mind, it spoke out -- "It appeared to me that you would not believe as to how the matter in the nucleus was below the freezing point when the temperature on crust or outer cover was highest. You must be very surprised over these two contrasting situations. Under this pretext, I tried to seek your support for my knowledge, but you gave it to me in a round-about-manner. What I meant was that the nucleus must be situated at a place whose temperature was even below the freezing point. If supposed that the temperature on the crust and the nucleus was the same, then the linear or uni-directional speed of the Sun should be near the speed of light, which is not, and that is why the temperature at the nucleus of the Sun must be even below freezing point.

The inner place of each stable & balanced star produces entirely different matter which do not resemble with the matter-world. The matter loses its own matters tic character get change into non nucleus. non-atomic structural matter. It is another kind of fusion of matter world without radiating energy. It changes into permanent stable & in non

breakable form. We called it TATKAN i.e. the matter of soul or dark-matter.

The long lasting balanced sun convert its at least ten percent of total mass into the dark matter. The coolest form of matter which is near to convert into dark matter complete its remaining journey of change through the life of living being. Such a incomplete dark matter get shelter of living world to fulfil its stability. Its incompleteness generate some effininty towards living world to complete its journey of stability to be fulfilled.

The whole universe is packed with such non visible non matter where the galaxy are floating on it. Aparting from each other are binded with the medium of dark-matter. The invisible dark matters are more than lakhs times than visible matter of whole universe.

Dear mind, you may surprise to know that the inner place of sun is not the coolest one but the hallow one also. It may be too hallow that thousand of planets could be accommodate in it. The hollowness is generated continuously due the shrinkage of matter into the nonnuclear matter into dark matter. The hollowness increases until it get burst or explode. The inner wall of

hollowness is made up of strongest hardest matter which is ready to convert. This is the short story of creation of dark-matter, the soul matter.

Oh Mind, but the same fact is proved quite opposite in respect of the planets and satellites of the Solar family. During the first phase of the birth of the Sun, the members of entire solar family, for their motion, got the required gravitational pull directly from the Sun, and of course they must have derived some gravitational pull even from their own crust, for quite a long time. Though they received gravitational pull from the Sun, the pressure of gravitational pull like that of the Sun was not formed, and that is why the outer covering of all the planets and satellites started changing into hard matter, but such a process must not have continued for a long time, yet this process must have done something great due to which the outer covering (crust) of these planets and stars must have started cooling down, and they must have turned into solid objects. This process must have been continuing even after the exhaustion of left over gravitational pull. Till then, there must have been some similarity between their

formation and that of the Sun-matters. As this similarity must have started changing into dissimilarity, all the planets must have become self-dependent for the gravitational pull required for their individual motion. It is possible that they must have depended on the activation in their nucleus because of delay in the use of outer covering. They must have changed the active matter into a little energy and thus created the gravitational pull. This is the reason that the nucleus of all the planets and stars remained always more active than the outer sphere of the Sun, and that is still working like the Sun as highly sensitive and complex as well as an alert brain. But, the constant use made the inner circumference of active temperature reduced and started cooling down, resulting into development of the shape of the planets and stars.

In this way, the outer sphere of the solar family started going towards zero temperature and the nucleus towards high temperature. The radioactive matters helped in the process of maintaining the temperature. But, as the radiation constantly keeps percolating towards the nucleus and that is why this part is hotter than the outer sphere of

the Sun. These radioactive matters with their emanated rays keep the nucleus always hot at the required temperature and keep fulfilling the need of gravitational pull outside. In this way, a bigger part of the nucleus of the Earth remained hot like the Sun, and which worked as an accurate and alert brain for the Earth. That is why the Earth and other planets and stars became self-controlled masses.” It continued to say, “But, now in the journey ahead, the Earth, distributing its need of gravitational pull to the resources of its outer covering, and completely detaching itself from other planets, is getting self-controlled by itself. Gradually, the dust particles, air Sun-light of all barren planets changed into gravitational pull and started helping their liquid central brain. And, therefore, the temperature of their nucleus remained stable for a long time. The Earth, on the other hand, rather than changing its soil into dry dust and air, gave birth to a vast world of creatures, animate and inanimate things. It extracted more work from the world of creatures, in comparison to the dust, and maintained its inner temperature greater than that of the Sun, and kept the sensitivity and activity of its inner temperature updated,

which is found even today. The half wheel of its nature is connected from here only, which you could not see, and the story of its life and liveliness begins from here. When other planets were receiving their gravitational pull from their nucleus and also from the dust of their crust as well as the air in order to maintain their motion, the behaviour of the Earth then was quite different from them. When the crust of the Earth had completely cooled down and all matters had started appearing in their real forms, the Earth since then had started distributing its need of gravitational pull to its various resources; it derived support from them and reduced its dependence on the matter in hot liquid form gathered in its inner sphere, the nucleus. In this venture, the liquid wealth, the water, spread on its crust helped it first of all. The special molecular construction of water receiving energy from the Sun directly changed it into maximum gravitational pull, and stocked the same for the Earth as an additional requirement and kept it emanating. The dependency of the energy on the centre, the nucleus, then started reducing, and the pressure too disappeared. As a result, the explosion or the decentralization of matters in

the nucleus stopped, and the temperature remained stable. Gradually, when the temperature remained constant for a long time, the water started assisting in the creation of life on the earth. For such a charismatic phenomenon, the momentary stability in the temperature must have played a vital role, bringing stability in the wavering magnetic waves too. Earlier, several elements dissolved in the water got mixed up and also became separated due to their wavering characteristics, and making changes in the formation of chemicals dissolved in it. But, during the stationary moment and stable temperature, some such changes must have occurred in the chemical structure of certain minerals dissolved in the water, or even in a drop of it, or even in the most minute part of it, that such structure must have been capable of creating maximum gravitational energy from the energy it received from the Sun. In this way, its structure must have remained in existence for some time and attempts to create similar structures must have been successful in procuring the same minerals nearby. It must have tied itself to the characteristic of such created gravitational energy and made the friendship more

sustainable and helped in maintaining its shape and structure as before. In this way, the Earth developed in the field of procuring additional gravitational pull by constituting an easy mechanism. But, then, not even one characteristic of very simple and subtle creature must have been present in that constitution. It must have then, depending on its sphere and creating gravitational energy in more quantity, must have bound itself to that constitution, and there it must have produced similar constitution and broken it into pieces which must have increased in their number. They must have been then assembling their chemical constitution with more or less changes, and must have developed more in respect of creation of gravitational emanation. In this way, several types of creatures with developed constitution must have come into existence. In other words, the attempt to gather additional quantity of gravitational energy must have encouraged creation of lives on the Earth. And, such a special enterprise for creation of additional gravitational pull must have spread all over the Earth in the form of green moss surrounded by water. Then, the Earth's dependency towards its nucleus must have got

reduced. Its great advantage must have been to the Earth in terms of reducing the speed of cooling of its inner part. The speed of reduction in its active circumference must have been affected, and because of that there must have been reduction in its tendency to grow, expand or swell. It is because the hot and liquid matter at the nucleus (womb) of the Earth has a special tendency that once it is changed into gravitational energy, its constitution (structuring) is slightly affected, resulting in development of its volume, and as the pressure of volume is outward, the Earth swells and remains swollen only. But, as it reduced its dependency at its nucleus, the speed of development of its volume, or swelling also must have reduced. The nucleus of the Earth must have always changed its heat into additional quantity of gravitational pull in order to struggle against Sun's gravitational cyclone that came on definite time, and the useless matter must have remained in more quantity in its nucleus, forcing the earth to swell in less span of time, and affecting every time directly or indirectly the world of creatures on it. Such a cyclone must have changed various phases of the whether, even time of day and night must

have increased a little. It is because of such big cyclones of the Sun, the Earth must have suddenly expanded and new portions of land must have projected upward from the seas and oceans, and deep cracks too must have developed in the bottoms of the seas and oceans. Hot lava must have seeped out to cement those cracks. It must have joined the cracks from the beginning, but at the same time the boiling water must have harmed the water creatures in great quantity. The lives in the water must have got the projected lands in the seas and oceans, what we call islands, and there they must have settled their new life on them. They must have then become manifold in their population. In this way, the life cycle on the Earth must have come into motion, but whether the same cycle would continue in future or not cannot be predicted.”

Hearing this, the seriousness of the mind suddenly broke and it became startled for a while and expressing its anger, it said, “Why do you utter the words of doubt when you feel that the utterance of truth is under your command. I cannot allow you today to speak the words of doubt. Perhaps, under this pretext, you want to hide something.

But, do not hide anything today at least from me; keep quenching the thirst of my knowledge. I want to be one with you. I want to lose my every thing in you. Therefore, if you have brought me to the present moment, tell me the future of this life-giving Earth.”

The brain then kept quiet for a while and landed into introspection. In this way, it realized the entire nature, shivered with the blowing cold air and heard the silent music around him. Experiencing its deep heart beats, it then told the mind, “O Mind, the Earth till today kept cooling slowly as usual, kept expanding, kept becoming as fat as it can, yet it kept its geo-centric temperature more than that of the Sun ! It also made it highly sensitive to any gravitational friction from outside. It kept it more active than the alert brain, more capable. It is seen from the agility of its magnetic waves. But, the Earth, passing through a long journey of its life, is heading towards the old age and also becoming weak. Now, its dependency is more on the creatures living on it, and perhaps the life on the Earth will generate additional gravitational pull for it and act as its crutches, but this too has a limit. It will be helpless when

the congenial environment is not available to it. In the time to come, the weakness of the Earth will not be able to provide that environment which it has always been giving till now. It is because the geo-centric sphere of the Earth maintains its highest temperature due to those radioactive matters which are scattered around it, and whose radiation always percolates inward. This will help the geo-centric sphere of the Earth to maintain its heat. But, as it started expanding, becoming fat, it started distancing from the radioactive matters and there came a recession in its special impact. Now, it cannot, in close contact with its nucleus, help itself. Moreover, all matters due to constant percolation of the radiation must have changed into stable and balanced matters. Its radioactive matters because of both the reasons will not be able to keep the geo-centric sphere hot. Similarly, there will be reduction in the explosive matter found in the liquid matter in its geo-centric sphere, as per the need outside. Due to all this, there will be slight corresponding reduction in the temperature of geo-centric sphere after forty five thousand years, and in the coming seventy to eighty billion years the high

temperature of its geo-centre will turn inactive and cold. But, before that, all creatures on the Earth will perish in forty five billion years from now. Its reason is linked to the same aging factor. The end of life on Earth will also be due to its becoming fatter. Such a condition of the swelling of the Earth will come after four or five in number, small or big gravitational storms arising from the Sun. Due to swelling of the Earth beyond its capacity, its gravitational pull will get divided in larger part, and thus there will be fall in its gravitational pull, and this fall will go to such an extent that the air required for inhaling in respect of the creatures will become thinner and start rising up, causing a great suffocation for the lives on the Earth, and the lives will perish. However, the trees, because of their height, will be able to remain in existence for some time, but they also will have to die when the air becomes much thinner. Then, the gravitational pull required for the motion of the Earth from the living world will get stopped and the Earth once again will have to increase its dependency on its nucleus, to receive the force from the nucleus. That time, in order to reduce the pressure towards the nucleus, the Earth will start

changing its soil of the crust into subtle particles and will create seas of deep dust, and like other planets and stars, the Earth will start receiving energy from the Sun and changing the energy into gravitational pull, it will again help its hot nucleus, and in this way, it will then change into the desert of dust, as the other planets and stars are, and it will thus pass its last days.”

Hearing all this, the mind broke into tears which in fact flooded the eyes of the Pilot, drenching his face with tears. The mind was filled with anguish, and then it asked the brain, “Can’t we save it ? Can’t we elongate the life of its creatures to the last phase of the Earth ?”

Having heard the mind, the brain said, “We could have definitely succeeded in saving it provided we had got a least a single complete man. But, in his absence, its future has become insecure. If the manifest human race had been in tune with the Nature, and also quite natural, it could have been saved from the black spots of the Sun, it would have certainly made progress in its science and along with protecting itself, it could have also stretched the life span of its creatures to the last phase of its life. That is why I

termed the human race quite different from the dinosaurs, I called it the discovery of the Earth. The Earth had discovered human species for some major needs of its future. It had provided man the most developed body, and the most sophisticated mind to understand the good and the bad. In all, it had shaped its body structure in such a way that it could save itself for a long time, and also helped in saving the other lives on the Earth for a long time. Today had that race been alive, it could have known this mystery and it would have not traded the lives of the Earth, considering them like itself, rather it could have got engaged in ensuring its longevity and balanced the Earth in more constructive way. It could have understood one day that its discovery was made for such a work only. Alas! There must have been some discrepancy in the creation of human race, that it lacked a balanced reasoning in order to differentiate between the natural life and unnatural life, that its existence was for the wellbeing of the Earth only. And that is why, the human beings started making themselves very unnatural and were succumbed to the anger of the Sun. Even after this, I tried to my best to return this human

race to the Earth, and I searched every nook and corner of the Earth for man, thinking that even if a single complete man was found, he could re-adorned, reformed and all his wounds could be healed till the last phase, but no such man was found. Therefore, there is no option left but to return to the world of my origin, and get my companions here on the Earth. And so, I told you that we would not from here for the sake of going, but return to the Earth would be our motive. We will go to our world as representatives of the Earth to fulfill the aim of saving such a lively planet, and pass the message of this lively and rich planet to our world, and pray our companions for its safety, and perhaps they might become ready for the help, for they too are like us, the lovers of the Nature. We shall than inhabit the Earth with a large part of our civilization which will work for balancing the Earth, and which will make the service to the Nature its aim and duty, which will enliven this Earth again, which will make its crust look lush green again, which will provide it healing, and instill new life in waters by removing poison of radiation. In this way, suffocation caused by the fall in the gravitational pull in its nucleus

would be removed and the Earth will be save for billions of years with its enriched liveliness, and even other options will be also used so that no pressure is formed on the lives on this Earth. The scientists of our world then make thousands of deep holes in the Earth, in order to save its cooling geo-centric sphere, to save its sensitivity from further loss, and to save it from becoming fat beyond limit. They, with the help of tunnel-like pipes, will keep creating emptiness in the geo-centric sphere of the Earth so that the Earth should not swell due to the swelling of useless matters within, and the intensity of the gravitational pull would not be reducing and the air on the surface of the earth would not be becoming thin. At the same time, they would conduct light explosions under control so that the temperature at the geo-centre of the Earth should remain more than that of the Sun, so that it could as usual function like highly sensitive brain, and it would maintain the fickleness of the magnetic waves, and its centre would be able to produce the needed gravitational pull. In this way, through a major surgery, our civilization would be able to save this lively planet for billions of years. But, our slight

mistake in this complicated work can prove detrimental to this living planet. For such a complicated work, our civilization will have to pay more attention exhibiting more prudence. Our entire science and knowledge will be tested for the second time. Our equipment will stand there where the sustenance of any solid matter cannot be thought of. For doing all this work, a large part of our civilization will have to be settled here, and the same will then provide life to the Earth for sixty-seventy billion years. But, we will have to face several problems in order to get this message sent to our civilization; we will have to reach there. And, to reach there, we will have to get established into 'timelessness'. The question is how we will attain 'timelessness' with such a manifold agony of this Earth. In fact, I feel it very difficult to reach our world of origin."

When the mind heard the word 'difficult' it got irritated as if this one word had shattered his remaining strength. It then burst out with great confidence, "We will surely succeed, when our success is linked to a living planet, no power on Earth can deter us from succeeding in our goal."

The mind, repeating the same sentence, became tired, and the brain also agreed with it. For the soul of the Pilot, the wisdom cleared the path, and then both decided to return to their world of origin and invite their civilization to the Earth. Both of them remained quiet for a long time as if they were tired of racing after a mirage and they ultimately found it.

Lying motionless for along time, the mind said to the brain, “Oh dear, you have just relieved me of the tiredness of years. For the first time, I have understood you, and perhaps you have understood me. Today, the understanding of ours has reached that peak, wherefrom I am feeling that the cause of our sorrow is stress, our folly of being stubborn, and ignorance about each other. Whatever you saw, thought and retained thinking it to be yours, what I felt, I used to keep with me, and at times I would thrust upon you, and at times you would do the same to me. Though we were very close to each other, yet we remained ignorant about each other, and could not share our knowledge. Today, I am content with all that knowledge I have received. Having known you thus, my age-old

suppressed thirst has got quenched. Hence, both of us being in harmony will reach the 'timelessness', and finally go to our world of origin by breaking the wall of time. We will not let this most rare living planet perish before time, and we will save it somehow, and transmit its message to our world. We may live for it, or else we may die for it. Ah, both of us have become blessed by our mission who has give a newer dimension to our life, a newer meaning. We will shed our entire strength to achieve our goal and see that this living planet does not die its untimely death.”

Listening to the dialogues of the mind and the brain, the pilot landed into the turbulent stream of tears, which were drenching his heart as well as every pore of body, and the his entire heart was getting washed of all agonies and disappointments, and started regaining its real luster and strength. The Pilot sitting in the lap of Nature, realized for the first time the awakening of infinite friendship. While, his eyes were shedding pathos, mercy and pity, the brain was becoming elated within it and got filled with great amazement for the Nature.

The Pilot was listening to the silence of both. Seven days had passed for the brain to pass on to the mind whatever it had got naturally and whatever was acquired. The Sun rose seven times and also set seven times, yet the pilot lost in himself kept listening to the dialogues of the brain and the mind. But, by the seventh day, all verbally adorned knowledge had exhausted, and the mind too had become fully content with it. While both of them waiting for questions from each other, the mind naturally got exposing itself. The body was landing into ‘timelessness’ and the practice was perfectly going on due to well maintained silence.

Even thirteen days had passed since the pilot was sitting there on the platform under Bunyan tree. This day became blessed owing to self-realization. This day, the Earth for the first time got a man who wanted to live for it, who wanted to die for it, and who wanted to give a gift of longevity, who wanted to save it. This alien, foreigner, made of other element, man had developed infinite friendship for the Nature; he possessed a great pity for it.

Sitting under the Bunyan tree, when this complete man opened his eyes, he saw that the entire Nature was trying to awaken him from deep silence, and also reminding him of the refulgence filled in him, and also dissolving a melody of unique sweet music. The leaves were creating a sweet assonance and the cool wind was spreading the music all around, his heart was vaulting high, the moon light around him was making the darkness bathe in silver light, billions and trillions of stars were winking, and a kind of firework was being displayed. The stars were showering the cool light on the Earth.

Despite such a magic scene, the Pilot, sitting in a composed posture, was not moved even a bit. He knew it in advance the light was not from the break of stars, but from the comets which were heading towards the Earth with their dusty tails. Their tails were shining because of the friction caused by atmosphere, and throwing their light in the sky. The Sun had devoured several heads of such comets, leaving their tails to float. The dusty rain from the comets was not occurring on the Earth for the first time.

Such a rain had occurred even prior to this, during the post-dinosaur period, and it had covered the dark history with its dust so badly that no could doubt about their being unnatural. It was repeating itself today. The same dust was covering the skeletons of the cruel and unnatural creatures, and burying its dark history in the dust. Really, how forgiving the Earth is! It really had no animosity towards any one. It was attempting to remove all clues of the atrocities committed on it (Earth), and that is why the dust was covering every skeleton. After some months or years, certain small planets, being strayed from their paths will rain stones or meteors on the Earth. While some of such stones will injure the Earth, others will create the day-light in the night. Their motions too must have been affected by the black spots of the Sun, and they must have headed towards the Earth. Thinking so, he was staring at the fire-show. Having watched the fire-show in the sky for a while, the Pilot then started staring at the green vicinity in the faint light. It appeared as if the entire Nature was uttering to him through the hustling of the wind that it had become blessed by receiving him as a complete man who was

listening to the Nature with serene thought and mind. He was looking happy to find the complete man within him, and who he was looking for. While he was gazing at the greenery around him, it turned into dawn of the following day. The moment he realized the break of the dawn with first rays of the Sun, he got up from his seat and started gazing at the dense branches of Bunyan tree with the obliging sight. It was the same Bunyan tree which had provided the shade of its gravitational pull to innumerable self-reflections and made the dialogues between the brain and the mind successful.

It had saved them from being excited and restless, thus making them successful in their introspection. Soon, the Sun started spreading its crimson beauty. Having gazed the Bunyan tree thoroughly, the Pilot then started stepping towards his giant flying saucer. He was pacing in calm steps, and the soft stems of green grass, which were pressed under the weight of his steps, were raising their heads again.

One should arrive in this world in the similar way, like the raising of heads of the pressed grass. The Pilot realized

his completeness through the dialogues of the brain and the mind. His objective got a new dimension, and now he was not to retreat in his mission and not even to reconsider it, for all his speculation had got a full stop.

Soon the Pilot reached his destination and severely practiced the 'timelessness' there for some more time. He then started getting ready to fly off. He, leaving the four computers, loaded rest of the computers into his giant flying saucer, he also took the huge collection of living micro-organs which were stocked by his companions to carry them to their world of origin. Then one day, while being in 'timelessness' he again reached the Earth along with his three giant flying saucers. He got down at one place and picked up little soil, water and air in a container. He was constantly gazing at the Earth, but he made two-three rounds of it and left for his world of origin in the speed of light. While carrying the message of the Earth, he was operating from one of the flying saucers but taking the other two saucers also with him under an automatic control system. All the three flying saucers breaking the wall of time soon disappeared into the pitch dark of the Space.

These giant flying saucers once had come out of their world to quench the mental thirst of their people and had thought that they would do the needful, but could not. Perhaps, remaining thirsty and empty is their destiny. That is why they are called 'saucers'. Their quest was their thirst, which began from their world and yet remained the same even after their return home, the unending quest, and the unending thirst.

The dark matter, Matter of soul
